Creating Solutions Building Partnerships

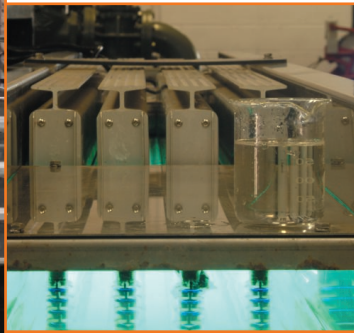

CORIX helps communities build and manage infrastructure for water, wastewater and sustainable energy. Our role can range from providing products for water or wastewater distribution systems to turnkey multi-utility systems management.

Who we are

CORIX has more than 65 years of experience designing, building, financing and managing the vital utility infrastructure systems required for communities to grow and thrive.

CORIX is a privately held company whose principal owners are CAI Capital Management Inc. (CAI) and BC Investment Management Corporation (BCIMC). CAI and BCIMC are large and stable members of the investment community. They manage funds for premier financial institutions, government agencies and publicly administered trust funds, including large sector pension plans and have substantial investment holdings in Canada and the United States. Through its owners, Corix has the scale, resources and capital to execute an established strategy, build on past successes and react to market opportunities in a dynamic manner.

In the community

CORIX does not own or sell water or energy; instead, we ensure the safest, most efficient transport, delivery and treatment systems. CORIX has a proven track record in building partnerships that foster community growth and development. With our expertise in designing, building, financing and managing vital infrastructure, we offer greater accountability, appropriate risk sharing and a competitive structure that has earned the respect of our community partners.

Our advantage

CORIX brings experience, stability, efficiency and a cost-effective approach to operating and maintaining sustainable utility infrastructure for communities.

Our specialized expertise allows us to offer a rational business model with increased accountability that fits with public sector goals. We provide the best possible solutions for our clients: safe, long term, cost effective utility infrastructure systems and services for communities and the people who live and work in them.

What we do

CORIX designs, supplies, builds, finances and manages utility infrastructure to treat and transport water and wastewater and provides sustainable energy systems. From design and fabrication to operations and maintenance, we can create a new system or improve existing facilities. Our activities are divided into three business segments: CORIX Water Products, CORIX Utilities and CORIX Water Systems.

CORIX Water Products

From pipe and valves to fire hydrants and irrigation equipment, we serve our customers from 32 strategically located branches in Canada (British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Quebec) and three branches in the United States (California). Our clients include municipalities, golf courses, contractors, farmers and industrial users.

OUR PRODUCTS INCLUDE:

- pumps
- HDPE supplies and service
- municipal water and wastewater products
- landscaping and irrigation supplies
- drainage supplies
- water meters and AMR solutions
- mechanical and industrial supplies

CORIX Water Systems

CORIX Water Systems designs and fabricates custom water and wastewater treatment systems for municipal and industrial applications. We also supply a variety of engineered water distribution systems. We offer a comprehensive and flexible approach to delivering the correct systems, from equipment supply to full system design, construction, operations and maintenance.

WE OFFER:

- engineered water and wastewater treatment plants
- pre-assembled and pre-tested packaged valve and flow meter systems
- engineered pump and blower systems complete with process sensors, control systems and variable speed motor drives
- complete line of pressure reducing valves
- pumps and blowers for any municipal and industrial application
- pilot plant testing, electrical, control and SCADA systems
- on-site start up and commissioning services
- capital cost reduction - lease programs

CORIX Utilities

CORIX Utilities develops customized water, wastewater and sustainable energy systems and provides field metering services for clients across North America including municipalities, resort properties, gas, water, and electric utilities, developers and institutions. Our expertise is integrating traditional and non-traditional infrastructure systems, incorporating technological advancements and providing a highly skilled team to deliver the best solution to build sustainable communities.

WE PROVIDE SYSTEMS FOR:

- water treatment and distribution
- wastewater collection and treatment
- sustainable energy systems (GeoExchange, district heat, biomass and hybrid)
- multi-utility systems
- AMR installation and deployment
- meter reading, meter shop and field services
- customer care, billing, collection, call centre

Building a world of sustainable communities

CORIX uses innovation in the design of utility infrastructure, helping communities to leave a smaller environmental footprint. While respecting the environment, we provide cost effective, safe and efficient solutions that enable communities to flourish and sustain over the long term.
